

Notes: This will MOST LIKELY be modified. The letter at the end of each step is the slot on the robot. Jackson's missions will be inserted according to where they are. **ROBOT STARTS ON RIGHT SIDE!** William will rearrange slots accordingly before competition. More to come!

Moving wall placements (Front View):

Each square is a panel for attachments:

A1	B1
A2	B2
A3	B3

1. Ashton's first mission (Angler Artifacts #11) that he will run on the right side of the board.

A

Note: If Ashton or Jackson decides to code more missions, these missions will be inserted between step 1 and 2. Make sure to change the slot.

2. Home transfer right side of the board to the left side. **B**
3. The robot will be set up on the left side of the board using the jig and run with the stick square attachment at **B2**. This is mission Surface Brushing #1. **C**
4. Set up using the jig on the left side of the board, robot side parallel to the long side of the board. Approximately $1 \frac{3}{4}$ vertical hashmark. No attachment and no moving wall for this run. This is Salvage Operation #12. **D**
5. Set up the robot side perpendicular to the long side of the wall at approximately the $2 \frac{1}{2}$ horizontal hashmark. Hand-like attachment at **A3** of moving wall. This is Map Reveal #2 and Mineshaft Explorer #3. **E**
